
Conference: 3D Printing and its Impact on IP

Date:

Thursday, 02.04.2020

Location:

Berlin, Germany

Host:

EPO / EUIPO

Speaker:

Various

In view of the present situation with the Coronavirus (COVID-19) the European Patent Office (EPO) is postponing all EPO organised events that involve more than 50 participants in March and April. Organisers will contact participants on an individual basis and, where possible, inform them of the new dates.

The European Patent Office (EPO) and European Union Intellectual Property Office (EUIPO) are jointly hosting a conference on one of the most dynamic technologies of the fourth industrial revolution: additive manufacturing (AM). Often referred to as 3D printing, this fast-moving technology is reshaping traditional manufacturing.

AM now allows us to make products that were previously considered unmakeable: prosthetics, artificial coral reefs, aircraft components and even 3D-printed homes. These products can be customised, logistics costs can be cut, and manufacturing cycles can be sped up. AM is everywhere and used in sectors as diverse as fashion, medicine, automotive and aerospace. The opportunities are immense. But what challenges does it pose, particularly when it comes to intellectual property (IP)? 3D printing impacts diverse areas of IP protection including copyright, patents and design rights. Is the IP system ready to face these challenges?

At this one-day conference, expert presenters - ranging from policymakers, entrepreneurs and investors to inventors and patent and trade mark attorneys - will share their experience and perspectives. It promises to be a lively and engaging event for SMEs, researchers, IP professionals, policymakers and business leaders.

Registration will open in February 2020.
